iterative variant: re-solve with other pods' loads (3 rounds)
Traffic
50 / 100 / 150 flows
12.8 Mbps per flow
Fat-Tree, k = 4
16 hosts
96 directed arcs
(50 Mbps each)
Decompose by
source pod
4 subproblems, b = 0
Solver per
subproblem:
SQA (P = 16) or SA
Coordinator:
priority repair,
then greedy fill
Tuning (validation seeds 100–104 for SQA β, Γ and SA schedule; check on fresh seeds 105–114)
Evaluation: seeds 42–71 (main scenarios), seeds 42–66 (scale study); exact MILP reference on N = 8, 12
Scoring, identical for all methods:
PL_flow, BWL, class loss,
JFI / CoV, latency
